

THE 2021-22 ROBERTSON LECTURE

KEYNOTE SPEAKER

DR. KAI CHAN

Professor, Institute for Resources,
Environment and Sustainability,
University of British Columbia

The Robertson Lecture is named in honour and remembrance of Dr. Bev Robertson, and made possible by the continued support from his wife Elaine and their family.

CONFRONTING THE CLIMATE & ECOLOGICAL CRISES WITH INTENTION:

WHAT PATH TO GENUINE POLICY SOLUTIONS?

With an accelerating climate and ecological crisis, floods, fires, extinctions, and heat domes are the new normal. In this talk, Dr. Chan will address what we know about the causes of the climate and ecological crises, why 132 of the world's nations concluded that transformative system change was the only desirable way forward, and what law and policy reform might achieve that. But science doesn't dictate policy, which is where we come in as concerned citizens. He'll review what we know about how deep social change happens, and what the science says about how individuals can spark change.

NOVEMBER 17, 2021

7:00 - 8:30 PM (CST)

The 2021-22 Robertson Lecture will be delivered via Zoom. Those interested in attending this free, online lecture must register in advance.
