

USING DATA IN EVIDENCE-BASED POLICY DEVELOPMENT

Finding, understanding and managing data are essential to the development of evidence-based policy. This workshop will provide a practical overview of Canadian Federal data retrieval, including using key terms, levels of data access, types of data and hard to find subjects. It will also address reading data analytically with an awareness of source and sample of the data, methods of data collection and common forms of bias in data analysis. Participants will also be given best practices for managing and storing data and considerations around sharing and reusing data. Facilitators will also introduce the benefits of accessing the Research Data Centre.

Facilitated by Cara Bradley (Research & Scholarship Librarian) Kaetlyn Phillips (Liaison Librarian) and Jennifer McConnell-Nzunga (Analyst - Regina Research Data Centre)

TUESDAY, FEBRUARY 25, 2020
8:30 a.m. - 12:00 p.m.

Room 308 - College Building
College Avenue Campus, University of Regina

There is no cost to attend this workshop. Please RSVP by emailing: js_training@uregina.ca
